Y.
ROSTOTSKAYA V.J. Burdenko Inst., Moscow, Contribution to the surgical treatment of spina bifida occulta (Russian text) Vop. Nejrokhir. 1951, 5 (33-38)
Spina bifida occulta calls for surgery when there are signs of severe nervous impairment, e.g. incontinence or urine or pain. The treatment consists of lumbosacral de-compressive laminectomy with excision of all extradural scars and arachnoid adhesions. Malformations of the spinal cord offer no contra-indication to surgery. Twentynine patients were successfully treated in this manner. The best results are obtained in cases of nerve-root compression caused by narrowing of the intervertebral foramina.

The crystalline state of anabasine. B. K. Rostotskii
and A. I. Ban'kovskii. *Doklady Akad. Nauk S.S.R.* 94,
809-810 (1954). After prolonged storage of anabasine in a
stoppered vessel there was observed the formation, near
the liquid interface, of needles which could be preserved in
solid form up to 25-30°. All derivs. (chloroaurate, m. 187-
9°; dipicrate, m. 201-4°) are identical with those of anabasine.
Thus it appears that a solid form of anabasine exists at
normal pressure and temp. G. M. Kosolapoff

AUTHOR: Rostotskiy, V.K., Engineer. 100-58-2-1/9

TITLE: The Results of an All-Union Conference of Builders at the Kremlin. (Chto sdelano posle vsesoyuznogo soveshchaniya stroiteley v Kremle).

PERIODICAL: Mekhanizatsiya Stroitel'stva, 1958, Nr 2, Pp 3-8.

ABSTRACT: The effects brought about by the resolutions of the All-Union Congress of Builders held at the Kremlin in December 1954 are evaluated. Whereas the total output of precast reinforced concrete was 1.86 million m³ in 1954, it has increased sevenfold during the last three years, i.e. to 12.4 million m³. The total capacity of concrete casting machines, which were produced during the last three years, allows for the production of 20 million m³ of floor slabs per year. The total capacity of tensioning equipment for reinforcement during the last three years reached 5.9 million m³ per year. New cement lifting equipment "Erlift" was introduced as part of cement storing installations. This equipment was based on the design of the Institute VNIIStroydormash. In 1957 a hydraulically operated cutter for cutting 70mm diameter

1/4

100-58-2-1/9

The Results of an All-Soviet Conference of Builders at the Kremlin.

steel reinforcement was introduced. In 1957 six, eight and ten-storey blocks of flats were erected in eight to ten months, i.e. two to three times quicker than previously. In 1955 the first 175 hydraulically operated excavators with bucket capacities of 0.15m^3 were manufactured. In 1956 production reached 1,559 units and in 1957 3,289. The Uralmashzavod excavator factory increased their bucket capacity from 3m^3 to 4m^3 , the Voronezh from 1m^3 to 1.25m^3 and the Kovrov from 0.5m^3 to 0.65m^3 ; this represents an increased output of excavators of 20-25%. The delivery of new excavating machines resulted, in 1956, in an increased volume of excavations of 120.3 million m^3 against 99.8 million m^3 in 1954, i.e. an increase of 21%. The over-all production output of heavy-mounted graders amounted to 370 between 1952 and 1954. Between 1955/1957 the output rose to 4,760 units. During the last three years 26,400 bulldozers were manufactured against 16,900 units between 1952 and 1954. The Bryansk factory completed a prototype of road cutter attachable to tractor DT-59 and a new large mobile grader-elevator D-369. Its output is $600-800\text{ m}^3$ per hour and weight 25 tons.

The Results of an All-Union Conference of Builders at the Kremlin.

In 1957 the Nikolayev factory for road machinery commenced the production of new machines for building concrete roads, and others for the consolidation of the ground. In 1955 a transportable loading installation was manufactured with a capacity of 300 tons per hour and a stationary loading installation with a capacity of 200 tons per hour for unloading sand and gravel from railway trucks on to platforms. In the same year vacuum cement transporters were constructed for unloading covered railway trucks, the output being 20-50 tons per hour. In 1957, 550 of these units were manufactured. In 1956 the production of loaders mounted on tractors KHTZ-7 and DT-55 commenced. Ninetyseven truck-mounted heavy assembly cranes with capacities of 20-50 tons were manufactured in 1957. The Institute Giprostrommash prepared projects for fully automatic concreting factories operating with four concrete mixers with capacities of 2400 litres each, and four with capacities of 4,500 litres each. The VNIISstroydormash adapted a new system of automatic dosing for concrete mixers based on photo-elements which resulted in considerable economy of cement. In 1958,

ABSTRACT:

Rostotskiy, V.K., Engineer. SGV/100-58-5-3/15

New Building Technique. (Novyyu tekhniku-stroitel'yan).
Summary from Conference on Building and Road Building
Machinery in Kiev. (Kitogam soveshchaniya po
stroitel'nym i dorozhnym mashinostroyeniyu v Kiyeve).

Mekhanizatsiya Stroitel'stva, 1958, Nr 5, pp 9-13.

The effects of the mechanization of the building trades on the building industry are evaluated. Those present were delegates of the Academy for Building and Architecture (Akademiya stroitel'stva i arkhitektury), the Gosplan of USSR and RSMR as well as other regional organizations. The improvements brought about by the 20th Congress of KPSS were discussed, also the directives of TSK KPSS and the Council of Ministers of USSR. Table 1 gives figure for increasing mechanization of building works up to 1957. A further plan for the production of road building machines for 1959/65 was discussed. Further development in the manufacture of building excavators was analysed. The Voronezh Excavator Factory is preparing to manufacture excavators of high output for digging canals, prototype of which should be completed in 1958 and rotor type of open cast excavators with buckets.

of 250t. The industry for road building machinery is working on truck-mounted scrapers powered by tractors of 54-60 and 80-100 h.p. and others powered by tractors of 140-250 h.p. are in the course of planning. The Bryansk factory has already started the production of some of these machines this year. The Nikolayev factory is planning the production of a trailer scraper powered by a tractor of 165 h.p. Table 2 gives comparative technical values of self-propelled trailer scrapers. The manufacture of bulldozers, both track-mounted and attached as a trailer to tractors DT-14 and "BELARUS", is proceeding. Investigations carried out in 1956/67 showed that the output of bulldozers mounted on tractor DT-14 of 140 h.p. is three to five times as effective as that of bulldozer mounted on tractor S-80. The Orel Plant is producing lorry-mounted scrapers D-265 and D-144 and since 1957 lorry mounted scrapers powered by 100 h.p. motors. The Chelyabinsk factory is producing similar scrapers powered by a motor of 150 h.p. Table 3 gives figures of increases in the number of machines in various maintenance depots. The Nyazepetrovsk factory produced

SOV/100-58-5-3/15

New Building Technique.

a new type of crane, T-226. According to the plans of the Giprostrommash, the Vyksa factory produced, in 1957, complete plants for the manufacture of large-panel reinforced concrete building details, e.g. wall panels, partitions, floors and floor slabs. The Khar'kov factory "Krasnyy Oktyabr'" produced new casting machines for large silicate blocks according to the drawings of VNIIStrommash. The Andizhan factory "Strommashina" produced a hydraulic plant for casting slab foundations. There are three tables.
